

Ask Cinderhaven — What does one wrong weight cost?

baseline scenario — figures reconcile to Dimension & Weight Integrity

What does one wrong weight cost?

Realized compliance deductions tied to weight/dimension/label issues: \$142,091 — averaging \$94 per incident. 3 of 50 SKUs (6%) have missing or zero case weight data, creating ongoing exposure. Projected annual risk at current error rate: \$86,342.

\$142,091 realized, \$86,342 projected

Key numbers

\$142,091 Realized compliance deductions

3 of 50 SKUs with weight data gaps
6% error rate

\$86,342 Projected annual exposure

How this verdict was reached

Compliance deductions = deduction_type containing ‘compliance’, ‘weight’, ‘dimension’, or ‘label’. Avg per-incident cost = total compliance dollars ÷ incident count. Projected exposure = error rate × annualized shipments (weekly shipment rate over the data window × 52) × avg per-incident cost. Thresholds from Dimension & Weight Integrity piece.
